

The psychophysiological scales which you will be encountering in the feedback page are as follows:

- Valence:** The dimension of valence is the negative-positive valence of emotion and ranges from unpleasant to pleasant (unhappy-happy).
- Arousal:** Physiological arousal is the activation state of emotion, which ranges from inactive to active state.
- Dominance:** A person’s feeling of dominance in a situation is based on the extent to which he feels unrestricted or free to act in a variety of ways.
- Liking:** How much do you like the video in the scale of 1 to 5?
- Familiarity:** Are you familiar with the content of the video? Rate on the scale of 1 to 5
- Relevance** Is there any past life event which is resembling with the situation in the stimulus video.
- Emotion Category Dropdown** Based on the selected valence and arousal participants will be shown list of emotion.

**Plot Legend:**  
High Arousal: HA  
Low Arousal: LA  
High Valence: HV  
Low Valence: LV

The plot is representing 2 dimensional valence-arousal space and emotion therein to give the idea about what kind of emotion can fall into the quadrants. (3d is difficult to visualize that’s why only 2d plot is shown)
